

Three ways to lay out the same form

Same fields, same data in all three — only how you move through the process changes.

This mockup illustrates a 'Guided single-page review' layout. It features a vertical sidebar on the left with five menu items. The main content area is divided into four horizontal sections, each containing three lines of placeholder text. A vertical line on the left of each section indicates the current focus. At the top, a green box displays '3 items need you'. To the right, a green box shows '✓ PASS' and '150% SAFMR check — live'. A dark blue 'Generate' button is positioned below the status. A downward arrow is at the bottom center.

Guided single-page review

Recommended

Scroll top → bottom. Only flagged items pop; the rest stays calm. The check + Generate are always in view.

Fast for experts, still hard to miss a problem.

This mockup shows a 'Stepped wizard' layout. At the top, a progress bar with eight steps is shown, with the third step highlighted. Below it, the title 'Step 3 of 8 — Contract administrator' is displayed. The main area contains a large text input field with four lines of placeholder text. At the bottom, there are 'Back' and 'Next →' buttons.

Stepped wizard

One section per screen. Click Next through each, review everything at the end. Very guided —

but slower and more clicking when most is correct.

This mockup depicts a 'Refined dashboard' layout. It consists of a 4x3 grid of twelve panels, each containing three lines of placeholder text. Each panel is preceded by a vertical colored line (blue, green, or orange) indicating its status. The layout is clean and organized, allowing for easy scanning across columns.

Refined dashboard

Everything on one screen in columns. Nothing hidden, but more to scan and eyes zig-zag across columns.

This is essentially today's layout, cleaned up.
